

30-Day NCLEX-RN Study Planner

A structured 4-week plan for Next Generation NCLEX prep: daily study blocks, NGN item-type practice, readiness checkpoints, and free resource pairing.

Best for: nursing students preparing on a budget

What is inside

- 30 daily study prompts
- Weekly focus areas: fundamentals, med-surg, pharm, OB/peds, psych
- NGN clinical judgment item-type checklist
- Readiness exam milestones and remediation loop
- Free + low-cost resource stack

Days 1-7: Take a baseline practice set. Review fundamentals, safety, infection control, prioritization, and delegation. Complete 40-60 mixed questions/day. After each set, write one sentence explaining why each incorrect option is unsafe or lower priority.

Daily checklist

- ☐ 2-3 focused study hours
- ☐ 40-85 practice questions
- ☐ Review rationales for every option
- ☐ Log 3 weak topics
- ☐ One NGN item-type drill
- ☐ 10-minute lab/med refresh

Reflection prompt: What cue changed your priority decision today? What distractor answer looked attractive, and why was it wrong?

Days 8-14: Rotate cardiac, respiratory, renal, endocrine, neuro, and GI. Pair every system with common medications, adverse effects, and teaching points. Complete at least two NGN case studies this week.

Daily checklist

- ☐ 2-3 focused study hours
- ☐ 40-85 practice questions
- ☐ Review rationales for every option
- ☐ Log 3 weak topics
- ☐ One NGN item-type drill
- ☐ 10-minute lab/med refresh

Reflection prompt: What cue changed your priority decision today? What distractor answer looked attractive, and why was it wrong?

Days 15-21: Focus on development, maternity complications, therapeutic communication, crisis care, and assignment/delegation. Practice matrix, bow-tie, drag-and-drop, and cloze items.

Daily checklist

- ☐ 2-3 focused study hours
- ☐ 40-85 practice questions
- ☐ Review rationales for every option
- ☐ Log 3 weak topics
- ☐ One NGN item-type drill
- ☐ 10-minute lab/med refresh

Reflection prompt: What cue changed your priority decision today? What distractor answer looked attractive, and why was it wrong?

Days 22-30: Take a readiness exam early in the week. Remediate weak categories with targeted sets, then retest. Prioritize sleep, confidence, test-day routine, and clinical judgment reasoning over cramming.

Daily checklist

- ☐ 2-3 focused study hours
- ☐ 40-85 practice questions
- ☐ Review rationales for every option
- ☐ Log 3 weak topics
- ☐ One NGN item-type drill
- ☐ 10-minute lab/med refresh

Reflection prompt: What cue changed your priority decision today? What distractor answer looked attractive, and why was it wrong?

1. Recognize cues from vitals, labs, assessment findings
2. Analyze cues and identify what is most urgent
3. Prioritize hypotheses using ABCs/safety/unstable vs stable
4. Generate solutions before looking at answer choices
5. Take action with least invasive/highest safety intervention first
6. Evaluate outcomes and know when to escalate care
